

Tomer Naydnov

TECHNICAL PRODUCT BUILDER

Software engineering graduate - M.Sc. student - Product, systems and implementation

+972-50-5752650 | tnaydnov@gmail.com | tomernaydnov.com | [GitHub](#) | [LinkedIn](#)

EXPERIENCE

Programming Instructor & EdTech Content Developer

Nitzanim | 2023 - present

- Teach programming and develop syllabuses, presentations, lesson plans, instructor guides and exercises.
- Translate stakeholder and classroom needs into requirements, plans, Gantt dependencies, tested changes and delivery support.
- Co-develop Arc with another engineer. Repository-visible work includes architecture, portal UX, security, realtime behavior, touch interactions, testing and CI.

Tier 2 Technical Support

IDF, Israel Electric Corporation and Isracard | 2020 - 2023

- Diagnosed user and system issues across Active Directory, Citrix, remote access, hardware, software and connectivity; documented fixes and coordinated with users and technical teams.

SELECTED WORK

Arc - learning operations platform

Co-developed | 2026 - present | [Portal online](#)

- Connects reusable educational content, live classroom delivery, student work, instructor feedback and operational insight in one system.

Applytide - job application operations

Solo creator | Aug 2025 - Apr 2026 | [Source archived](#)

- Structured capture, application pipelines, documents, reminders, analytics and interview preparation across a React/FastAPI/PostgreSQL system.

Eventa - event-scoped social product

Solo creator | 2026 | [Discontinued](#), [source public](#)

- Implemented mobile QR onboarding, guest profiles, matching, private messaging and organizer workflows with Next.js and Supabase.

License Plate Recognition

Five-person BGU capstone | 2024 - 2025

- Focused on motion detection, data gathering, model training and fine-tuning, and failure analysis within a continuous plate-recognition pipeline.

Trading System - multi-store marketplace

Team engineering project | May - Jul 2024 | [Source archived](#)

- Java marketplace system exploring stores, carts, appointments, permissions and domain/service boundaries.

PROFILE

Technical product builder who moves from an unclear user or operational problem to a working system. I combine software engineering, systems thinking, teaching and hands-on product delivery - from framing and workflow design through implementation, testing and iteration.

EDUCATION

M.Sc. Industrial Engineering & Management

Shenkar | 2026 - present | [Expected 2028](#)

B.Sc. Software Engineering

Ben-Gurion University | 2021 - 2025

CAPABILITIES

Product & systems

Problem framing, requirements, user flows, workflow design, project planning, QA, field feedback, technical writing

Engineering

TypeScript, React, Python, FastAPI, Java, SQL, PostgreSQL, REST APIs, Git/GitHub, Docker, CI and automated testing

Applied AI

OpenAI API, prompt and workflow design, structured extraction, bounded LLM integrations

WHAT I AM LOOKING FOR

A technical product or product-minded engineering role on a small team, close to users and close enough to implementation to own the outcome.

WORKING PRINCIPLE

I find the workaround everyone has accepted, trace it to the real problem, and build the fix.
